SUBJECT: NRC INSPECTION REPORT NO. 70-1151/2006-001

Dear Mr. Fecteau:

This refers to the inspection conducted from January 23-27, 2006, at your Columbia, South Carolina facility. The purpose of the inspection was to determine whether activities authorized by the license were conducted safely and in accordance with NRC requirements. The area examined during the inspection was Radiation Protection. Within this area, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress.

As a result of the inspection, the enclosed NRC Form 591FF, SAFETY INSPECTION, is being issued. The enclosed forms indicate that no violations were identified during the above described inspection of your licensed activities. Please retain these forms for your files. No acknowledgment of this letter is required.

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be made available electronically for public inspection in the NRC Public Document Room or from the NRC's document system (ADAMS), accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html>.

Thank you for your cooperation. If you have any questions, please call me at (404) 562-4731.

Sincerely,

Thomas Decker for /RA/

SUPPLEMENTAL INSPECTION INFORMATION

Executive Summary

The Westinghouse Facility fabricates low-enriched uranium fuel for use in commercial reactors. During the period of the inspection, all operations were normal.

This routine, announced inspection included observations and evaluations of the radiation protection program. All areas were reviewed per Radiation Protection procedure 83822 except for R1.01, R1.02, R1.06 and R1.11. The inspection involved observations of work activities, reviews of selected records, and interviews with plant personnel. The inspection identified the following aspects of the licensee programs as outlined below:

Radiation Protection

- The licensee's self-assessments of the radiation protection program were implemented in accordance with the license and the regulatory requirements.
- The external and internal exposure monitoring program was implemented in a manner to maintain doses as low as reasonably achievable. Exposures were less than the occupational limits in 10 CFR 20.1201.
- Radiological safety postings, labeling and radiation job procedures were properly used to communicate potential hazards and protective requirements to workers.
- The radiation and contamination survey programs were appropriately implemented to protect workers, and to identify potential work areas posing an internal or external radiation hazard to workers.
- The licensee's radiation safety instrumentation and equipment was adequate and maintained operational. The licensee had a program in place for preventative maintenance and inventory.

Executive Summary (continued)

Inspector Follow-up Items (IFI):

- Temporary Instruction 2600/012 : *Institutionalizing Concern Regarding Safety Issues Identified in selected Past Generic Communications*

Information Notice 95-051: Recent Incidents Involving Potential Loss of Control of licensed Material. The licensee maintains a current sealed source inventory identifying the radionuclide, model number, activity, and location. The sources are kept secured by lock and key or are located in various machines throughout the facility. A custodian from the radiation protection program physically verifies the sources bi-annually.

List of Items Opened, Closed, and Discussed

70-1151/2006-001-01	Open	URI	The licensee will reevaluate the extremity monitoring program in the pelleting area due to changes in personnel and operations. The licensee will review current monitoring procedures and training in this area.
