To Whom it may concern

Concerning page 1774 of the Federal Register/Vol 71, No. 7/Wednesday, January 11, 2006, I feel very strongly that an independent safety assessment is called for. The risk assessments in the draft safety Evaluation released by the NRC assumes that the reactor is brand new. Not much is known about how the ~~aged~~ components of the reactor will hold up with an increase that may expose hidden weaknesses.

Also the Experimental Ascension test is just that "an Experiment" with the communities surrounding the plant as guinea pigs - putting the population at risk is irresponsible.
Jesse Lepkoff.
