Office of Nuclear Reactor Regulation (NRR)
Items of Interest
Week Ending March 3, 2006

NRR/Industry Senior Management Meeting on Materials Degradation Issues

On February 22, 2006, members of NRR senior management met with senior management representatives of the Nuclear Energy Institute, the Electric Power Research Institute, and the Materials Reliability Program (MRP) in a public meeting at NRC Headquarters to discuss materials degradation issues in pressurized water reactor (PWR) facilities. Industry representatives presented details of a reorganization of the MRP made in late 2005 and discussed plans for existing and future materials degradation projects. MRP identified key issues for 2006 that include implementing MRP-139, an industry report on the inspection of Alloy 82/182 butt welds in the primary coolant system of pressurized water reactors (PWRs), completing the PWR Issue Management Tables, and supporting the NRC rulemaking for revised requirements on pressurized thermal shock (10 CFR 50.61). During the meeting, MRP representatives affirmed their willingness to assist in the development of a new code case regarding primary system piping butt-weld inspections, which the NRC requested that ASME develop, including resolution of concerns over access to proprietary information that will be needed to establish the technical basis for the new code case.

Risk Management Technical Specifications Meeting

The staff met with the Nuclear Energy Institute and industry representatives on February 28, 2006, to discuss the Risk Management Guidance (RMG) document for Risk Management Technical Specifications (RMTS) Initiative 4b, Risk-Informed Completion Times. RMTS Initiative 4b will permit licensees to establish risk-based technical specification completion times when equipment is out of service. The use of on-line risk tools is a significant change from the current deterministic license amendment process for these changes. The RMG document is the critical path item for completing the reviews of the pilot plant applications from South Texas Project and Fort Calhoun Station. Pilot plant representatives at the meeting expressed a strong desire to complete this effort this year in order to obtain pilot plant license amendments. Final details are being discussed, such as how to treat probabilistic risk assessment functionality with technical specification inoperability.

Vermont Yankee Public Information Session on License Renewal Review Process

On March 1, 2006, the staff conducted a public information session in Brattleboro, Vermont. The session was conducted following the receipt of the license renewal application for the Vermont Yankee Nuclear Power Station to provide information on the license renewal process and opportunities for public involvement.

Issuance of the Draft Safety Evaluation Report (SER) with Open Items Concerning the License Renewal Application for Nine Mile Point, Units 1 and 2

On March 3, 2006, the staff issued the draft SER concerning the license renewal application for Nine Mile Point, Units 1 and 2, which contained one open item and no confirmatory items. A

public meeting is scheduled for April 5, 2006, to discuss the draft SER with the Advisory Committee on Reactor Safeguards.

Regulatory Issue Summary (RIS) 2006-02, "Good Practices for Licensee Performance During the Emergency Preparedness Component of Force-on-force Exercises"

On February 23, 2006, the staff issued the subject RIS which informs licensees of good practices identified based on staff observations of licensees' emergency preparedness performance during force-on-force exercises.

RIS 2006-03, "Guidance on Requesting an Exemption from Biennial Emergency Preparedness Exercise Requirements"

On February 24, 2006, the staff issued the subject RIS which provides guidance to licensees for requesting an exemption from the requirements of Title 10 of the Code of Federal Regulations (10 CFR) Part 50, Appendix E, to hold a biennial emergency preparedness exercise.

Vermont Yankee Extended Power Uprate (EPU)

On March 2, 2006, NRC approved a 20 percent extended power uprate (EPU) for Vermont Yankee, which increases its maximum steady state reactor core power level from 1593 megawatts-thermal (MWt) to 1912 MWt. The EPU is subject to a license condition in the areas of minimum critical power ratio, transient testing, and potential adverse flow effects. It is expected that the licensee will soon start to incrementally increase the Vermont Yankee power output and perform the test program necessary to achieve the new power level. This EPU is in response to the licensee's application dated September 10, 2003.

The additional energy requirements for the EPU are met by an increase in bundle enrichment, an increase in the reload batch size, and/or changes in fuel loading pattern to maintain the desired plant operating cycle length. Other changes to support the EPU were made to balance-of-plant equipment, including a new high-pressure turbine, new feedwater heaters and refurbishment of the electrical generator.

Vermont Yankee is the first boiling water reactor (BWR) EPU application to undergo NRC staff review using Review Standard RS-001 and it matches the largest BWR percentage-uprate to date (Clinton also received a 20 percent uprate in 2001). In addition, the staff made presentations on the EPU to the Advisory Committee on Reactor Safeguards (ACRS) sub-committee on November 15 and 16, 2005 (in Vermont) and on November 29 and 30, 2005 (in Rockville), and to the ACRS full-committee on December 7, 2005 (in Rockville). In its letter dated January 4, 2006, the ACRS recommended to the Commission to approve this EPU.

Haddam Neck License Termination Process

On February 24, 2006, NRC staff approved the second of five anticipated releases of land from the Haddam Neck site license as part of the license termination process. Haddam Neck is located in Meriden, CT. This release included 14 survey units in the outlying areas of the site. The next phase will be submitted for release later this year.

Meeting with USEC Inc. (USEC) on Nuclear Criticality Safety (NCS)

On February 24, 2006, staff from the Division of Fuel Cycle Safety and Safeguards met with USEC to discuss USEC's incorporation of NCS accident sequences in its Integrated Safety Analysis (ISA) Summary for the American Centrifuge Plant (ACP), proposed to be built and operated in Piketon, OH. During the meeting, USEC discussed its revised method for determining the credibility of NCS accident sequences and its draft changes to the ACP's ISA Summary.

Week Ending March 3, 2006

Meeting with Pebble Bed Modular Reactor (PBMR) (Pty) Ltd

From February 28 through March 2, 2006, NRC staff met with representatives from the PBMR (Pty) Ltd. to discuss the plant layout and systems of the PBMR reactor design. The purpose of the meeting was to familiarize NRC staff with the PBMR design, in support of future white papers that will be submitted to NRC for pre-application review in May 2006. During the meeting, the NRC staff expressed interest in detailed information on several key systems, such as the fuel handling system. PBMR (Pty) stated that many of the issues brought up by the staff will be addressed during the second set of familiarization sessions on the safety design and analysis and plant operations and events scheduled for March 15-16, 2006.

Contract Awards

On February 21, 2006, a competitive contract no. NRC-38-06-383 was awarded to Management Systems, Inc. The contractor shall provide, as needed, current, state-of-the-art training using proven methods to provide NRC staff with the knowledge and skills to effectively evaluate the adequacy of root cause investigations conducted by others. The total estimated cost is \$1,567,010, including all options. The period of performance is five years, including four one-year option periods.

On February 28, 2006, a non-competitive 8(a) contract no. NRC-10-06-396 was awarded to Bankers Business Management Services, Inc. (BBMS). The contractor shall provide NRC Headquarters On-Site Mail Support Services. The total estimated cost is \$1,328,071, including all options. The period of performance is four years and nine months, including four one-year option periods.

Community Informational Meeting on Braidwood Tritium Contamination

On February 28, 2006, Region III staff participated in an community informational meeting on the Braidwood groundwater tritium contamination at the Exelon offsite training facility near Braidwood. Also participating were representatives of Exelon Generating Co. and the Illinois Environmental Protection Agency, Illinois Emergency Management Agency, Illinois Department of Public Health, and the Will County Health Department. The purpose of the meeting was to answer the public's questions about the tritium contamination from the Braidwood plant and how it affects the safety of drinking water in the area.

Regulatory Conference on Prairie Island Emergency Preparedness Issue

On March 1, 2006, the Region III staff conducted a Regulatory Conference with representatives of Nuclear Management Company to discuss the safety significance of the plant's non-conservative emergency classification process at the Prairie Island Nuclear Power Station. NRC inspectors determined that the Prairie Island staff established a non-conservative emergency classification in the plant's Emergency Plan that, under certain flooding conditions, could result in the plant's failure to declare a Site Area Emergency. The NRC staff has completed a preliminary assessment of the problem and concluded that it is of "low to moderate" safety significance.
