I usually report to work earlier than most, around 18:00 hours. If you need to meet during work hours that is OK with me. I leave around 06:30 in the morning, but prefer to not interfere with end of shift turnover times, or remain at work after the assigned 12 hours. I do not mind however coming in on my days off, even for relatively short periods. I live close enough to not make to much of an inconvenience out of such visits. You will need to set up such a meeting through Operations management as stated before.

Mr. Polonczyk, What time will you be coming to work on next Wednesday night and what time do you finish in the morning - maybe we can meet during your work hours or before or after work. That is one option. Another option is to meet on one of your days off next week. I probably only need about an hour of your time and I can come to your residence or i can meet you somewhere near your residence. If those two options do not work for you - then I will meet with you on 8/10 or 8/11 during your day shift. Without getting in to too many specifics - I will interview you regarding your knowledge of why/how [redacted] closed the valve, thus stopping the steam leak. Please let me know of your availability.

I am currently working the night shift, rotating with "Bravo" shift. I am scheduled this week through Monday morning. I will return Wed night for Thursday, and the next three nights as well (leaving Sunday morning). The following two weeks, Aug 10th through 13th and Aug 16th through 19th I should be on Day work. I do not have a phone extension where I can be contacted, but if you need to have time with me I am sure it can be arranged through Ops Supervision (try Eric Powell or Joe Sullivan).

If I may ask, what specifically do you want to know. I might better prepare myself if I had some clue to the information you are seeking.

Mr. Polonczyk, I attempted to contact you through the dial in/name spelling method and was unsuccessful. Anyway, I work for NRC:OI in the Region I Field Office and need to speak to you about the [redacted] steam valve
