Subject: As I understand it the Waste control site where Les nuclear waste may go is in Andrews county, Texas

As I understand it the Waste control site where Les nuclear waste may go is in Andrews county, Texas. Andrews county is on record that they face water shortages.

But the NRC says that Lea County has enough water for the Louisiana Energy services uranium enrichment plant.

These two sites are very close to each other. How can the Texas waste control site sit in an area facing water shortages and the Les site sit in an area that has a lot of water. When both sites are so close to each other?

I used to work for the City of Hobbs. They were always telling us the water supplies were running out. Water rates were raised to encourage conservation.

Its my allegation that the NRC and State of New Mexico study for the water supply in Lea County in respect to the LES plant licensing is flawed
