Toby:

A couple of questions.

1. Do you know the total volume of contaminated water extracted by the CAP system since initiation in 1990?
2. Regarding private properties that WNI acquired, have the owners relocated out of the area or did some remain near Jeffrey City?
3. Has documentation regarding the Jamerman property purchase been submitted to NRC staff yet?
4. Can you provide me with .jpg files of the following images for the draft EA:
 - a. site location map
 - b. site features map with topography
 - c. monitoring well network with long-term care boundary
 - d. property ownership and long-term care boundary
 - e. potentiometric surface map
 - f. uranium and sulfate 1000-yr model predictions
5. The site characterization report states that approximately 7.7 million tons of ore were processed and approximately 7.7 million tons of tailings were disposed. Please confirm that the tailings and ore quantities are approximately the same.

Thanks for your help.

Steve
