Dear Mr. Unikewicz:

### CANUG Conference Presentations

On behalf of the Compressed Nuclear Users' Group (CANUG), I would like to recognize Mr. Unikewicz for his participation in a discussion concerning NRC's view of the Nuclear Industry's care of Instrument Air during our January 2006 Compressed Nuclear Users' Group Conference as sponsored by the Air Operated Valve Users' Group (AUG). The CANUG mission is "Dedicated to the development and exchange of technical information between Compressed Air Systems Engineers serving Nuclear Power Plants. This supports the need to improve the reliability, availability, and reduce the cost of the compressed air systems that serves the valves, instruments, and other components utilizing compressed air in controlling the conversion of nuclear energy to electricity." Mr. Unikewicz's presentation was right on target for our mission and was very well received at the conference. I would like to graciously thank Mr. Unikewicz for his time and effort to share with the CANUG. Without making the best with such valued opportunities, our conferences would not be as powerful as they have been since 2001. His willingness to share with us NRC's perspective provided us with great insight as to how to continue to strive for quality and reliability in our support of the continued safe operation of our Nuclear Stations.

Please thank Mr. Unikewicz for his CANUG Conference participation and we are looking forward to his future participation.

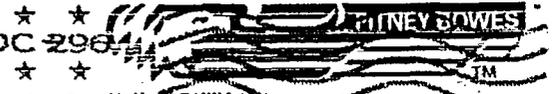

Kind Regards,

William M. Eister  
AUG Steering Committee Member for the CANUG
