NRC TO DISCUSS 2005 PERFORMANCE ASSESSMENT FOR LIMERICK NUCLEAR POWER PLANT

Nuclear Regulatory Commission staff will meet with representatives of Exelon Generating Co., LLC, on Thursday, April 20, to discuss the agency's annual assessment of safety performance at the Limerick nuclear power plant. The period of performance to be discussed is Jan. 1 to Dec. 31, 2005.

Exelon operates the twin-reactor plant, which is located in Limerick (Montgomery County), Pa.

The meeting, which will be open to the public for observation, is scheduled to begin at 6 p.m. at the Limerick Energy Information Center, 298 Longview Road in Royersford, Pa. The NRC staff will present the results of the assessment and be available to respond to questions or comments from the public before the close of the meeting.

"As we do every year, we have carefully reviewed the safety performance of the Limerick nuclear power plant during the previous calendar year," NRC Region I Administrator Samuel J. Collins said. "The meeting on April 20th will afford the public a chance to learn more about the results of our assessment and to pose any questions they might have regarding plant performance or our oversight activities."

A letter sent from the NRC Region I Office to plant officials addresses the performance of the plant during the period and will serve as the basis for the meeting discussion. It is available on the NRC web site at: http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/LETTERS/lim_2005q4.pdf. The meeting notice, with the meeting agenda attached, is available in the NRC's Agencywide Documents Access and Management System (ADAMS) under accession number ML060830255. The NRC slides will be available in ADAMS under accession number ML060950054. ADAMS is accessible via the agency's web site at: <http://www.nrc.gov/reading-rm/adams.html>. Help in using ADAMS is available by contacting the NRC's Public Document Room at 1-800-397-4209 or 301-415-4737, or by e-mail at PDR@NRC.GOV.

Overall, the Limerick plant operated safely during the period. The NRC uses color-coded inspection findings and performance indicators to assess nuclear power plant performance. The colors start with "green" and then increase to "white," "yellow" or "red," commensurate with the safety

significance of the issues involved. Because all of the inspection findings and performance indicators for the plant during 2005 were determined to be “green,” Limerick will receive a baseline (or routine) level of inspections during the upcoming assessment period.

Routine inspections are performed by two NRC Resident Inspectors assigned to the plant and by inspection specialists from the Region I Office in King of Prussia, Pa. Among the areas of plant operations to be inspected during the next year by NRC specialists are radioactive waste handling and transportation, problem identification and resolution, and operator license initial exams.

Current performance information for Limerick 1 is available on the NRC web site at:
http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/LIM1/lim1_chart.html .

Current performance information for Limerick 2 is available on the NRC web site at:
http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/LIM2/lim2_chart.html .
