April 10, 2006

U.S. Nuclear Regulatory Commission ATTN: Document Control Desk Washington, DC 20555-0001

Subject: USNRC Docket No. 72-1014 HI-STORM 100 Certificate of Compliance 1014 HI-STORM Final Safety Analysis Report Update per 10 CFR 72.248(c)(6)

Reference: 1. Holtec Project 5014

- 2. Approval of CoC 1014 Amendment 2 dated June 7, 2005
- 3. Holtec Letter 5014574 dated August 3, 2006

Dear Sir:

In accordance with 10 CFR 72.248(c)(6), Holtec International herewith submits an update to the Final Safety Analysis Report (FSAR) for the HI-STORM 100 Dry Spent Fuel Storage System, consisting of Revision 3 and Revision 4 of this FSAR:

- HI-STORM 100 FSAR Revision 3 includes the effects of all changes to the cask design or procedures that have received prior NRC review and approval through Amendment 2 to the HI-STORM CoC (Reference 2). This FSAR Revision also includes the effects of changes to the cask design or procedures made pursuant to 10 CFR 72.48 that were not previously incorporated into the FSAR, up to May 26, 2005. This FSAR Revision was previously submitted to the NRC (Reference 3) to satisfy the requirement outlined in the amendment approval (Reference 2). FSAR Revision 3 completely superseded FSAR Revision 2. This FSAR revision is submitted since it includes the revision bars to identify all changes described above.
- HI-STORM 100 FSAR Revision 4 includes the effects of changes to the cask design or procedures made pursuant to 10 CFR 72.48 that were incorporated into the FSAR after May 26, 2005. FSAR Revision 4 completely superseded FSAR Revision 3.

In both revisions, FSAR Section 1.0.1 includes a list of Holtec Engineering Change Orders (ECOs) for generic changes to the cask system that are reflected in the revision. A subset of those ECOs represent changes authorized under 10 CFR 72.48. The balance represent changes for which 10 CFR

HMSS01

Holtec Center, 555 Lincoln Drive West, Marlton, NJ 08053

Telephone (856) 797-0900 Fax (856) 797-0909

U. S. Nuclear Regulatory Commission ATTN: Document Control Desk Document ID 5014593 Page 2 of 4

72.48 was not applicable (e.g., editorial, correction of inconsistency, NRC approval). Lists summarizing the changes to drawings made by Holtec under the provisions of 10 CFR 72.48 in each FSAR revision are provided in Attachment 1 to this letter. Updated versions of drawings are provided in FSAR Section 1.5 of each revision. FSAR Revision 3 incorporated changes as a result of the approved license amendment LAR 1014-2, as well as changes under of 10 CFR 72.48. Attachment 2 to this letter identifies all pages where changes were made under the provisions of 10 CFR 72.48. In FSAR Revision 4, all changes, as marked with revision bars, were made under the provisions of 10 CFR 72.48.

All changes included in the FSAR text and tables in each revision are indicated with a revision bar in the right margin and the revision number in the lower right corner of the page. If anything in a particular text section (e.g., Section 1.X) changed, the entire section was updated to the new revision number. The revision bars indicate the specific location of the changes on the affected pages. Sections with no changes in a revision still indicate in the footer the last revision that this section was changed.

Any new or revised figures have been updated individually and include the new revision number in the footer below the figure. Figures that did not change still indicate the last revision number that the figure was changed. Lastly, both FSAR revisions include updated tables of contents and lists of effective pages, indicating the current revision of text pages and figures in the document.

10 CFR 72.248(c)(6) requires that an update is filed every 24 months from the date of the issuance of the CoC. With an initial certification date of June 1, 2000, the update would be due by June 1, 2006. However, it has also been a practice to submit updates in no more than 24 month intervals, although this is not based on a regulatory requirement. The last HI-STORM FSAR update (FSAR Revision 2) was submitted in March 2002. In order to not significantly exceed the 24 month interval between FSAR updates, the current update is submitted in April 2006. Since this update contains all implemented changes at this time, it will still be a valid update in June 2006 in respect to the 6 month period specified in 10 CFR 72.248(c)(7). Therefore, no further revised FSAR will be submitted in June 2006. Only a certification, as requested by 10 CFR 72.248(c)(4)(i), will be submitted at that time, referencing the current submittal. This way, submittals will be re-aligned with the 24 month schedule based on the initial certification date.

Telephone (856) 797-0900 Fax (856) 797-0909

U. S. Nuclear Regulatory Commission ATTN: Document Control Desk Document ID 5014593 Page 3 of 4

This FSAR update is provided as an electronic submittal only, in compact disc format.

If you have any questions or require additional information, please contact us.

Sincerely,

epen Carbon

Stefan Anton, Dr.-Ing. Licensing Manager
