FOR IMMEDIATE RELEASE

Exelon to Update Tritium Project at Community Information Night

BRACEVILLE, Ill. (Feb. 14, 2006) – On Tuesday, Feb. 28, Exelon will host a Community Information Night. The event is open to the public and will update area residents and provide facts on the tritium groundwater issue at Braidwood Generating Station. The event will be held from 4 p.m. to 8 p.m. at Exelon's Services and Training Center, located on Essex Rd. about three miles south of Rt. 113 in Wilmington, Ill.

Exelon representatives, technical experts and officials from state agencies will be on hand to provide information, review tritium location maps and answer questions on a one-on-one basis with attendees. General information about Braidwood Station and nuclear power will also be presented.

Instructors at the training center will lead tours of the simulator, a replica of Braidwood Station's Control Room where operator training is conducted, to provide the public with a sense of what happens inside the plant. There will also be take away information and refreshments served.

"This issue does not present a health or safety threat to our neighbors, and we are committed to keeping the public informed," said Exelon Nuclear Vice President Keith Polson, the station's senior executive. "The information night is just one of many ways of doing this."

As part of its extensive outreach program, Exelon launched a website and a Community Relations Hotline. The hotline provides a brief status update and also serves as a forum for Exelon to field community questions. Exelon representatives are committed to returning resident calls in a timely fashion. The number is (815) 458-7000.

The website address is www.braidwoodtritium.info and contains a wealth of useful information including fact sheets, maps, and federal and state agency contact information. In addition, several key Environmental Protection Agency documents are available including the agency's fact sheet on tritium and the notice of violation issued to Exelon in December 2005. Exelon's response to the notice of violation along and all news releases related to this issue are also available.

###

Exelon Nuclear is a unit of Exelon Corporation, one of the nation's largest electric utilities with approximately 5.2 million customers and more than \$15 billion in annual revenues. The company has one of the industry's largest portfolios of electricity generation capacity, with a nationwide reach and strong positions in the Midwest and Mid-Atlantic. Exelon distributes electricity to approximately 5.2 million customers in northern Illinois and Pennsylvania and gas to more than 460,000 customers in the Philadelphia area. Exelon is headquartered in Chicago and trades on the NYSE under the ticker EXC.
