AIR MAIL

Mr. Lyall Johnson
Licensing Division
U. S. Atomic Energy Commission
Washington, D.C.

SUBJECT: Special Nuclear Materials License SNM-33

Dear Mr. Johnson:

We recently completed an order for Atomics International for conversion of UF_6 to uranyl sulfate. Following completion of the job and collection and purification of the residues, it has been determined that we have remaining at the Hematite, Missouri plant 133.18 grams of uranium containing 118.62 grams U^{235} . This material was originally allocated to Atomics International, Canoga Park, California.

This letter is a formal request for an allocation to cover this amount of material which we propose to use in our plant for research and development purposes or to be transferred to others who have allocations for such material for similar purposes.

As soon as we receive official notification of our allocation, we will execute the AEC-459-A forms to transfer the official responsibility of this material from Atomics International, SNM-21 to Mallinckrodt Chemical Works, SNM-33.

If you have any questions, do not hesitate to call upon us.

Very truly yours,

MALLINCKRODT CHEMICAL WORKS
