Subject: Re: Final Notes on ANL Hot Cell Program

For Commissioner-level presentation it will be better to state:

LOCA Oxidation limit; we need Unirradiated and irradiated data for all alloys (Zircaloy, M5, ZIRLO)

We have data for Zircaloy; eventhough is not used, it provide bases for extension to other alloys
We have data for xxx
For Spent Fuel storage and transportation

We have the needed mechanical properties data for xxx

What we are missing

LOCA integral test data to be conducted in the AGHCF
xxx

>>> Ralph Meyer 02/09/06 5:30 PM >>>
Mike,

Farouk asked specifically for a diagram that show what we have, what is missing, and how we'll get it. I delivered this to Faouk a few minutes ago with the caveat that "how we'll get it" is still being negotiated, and we don't have decisions yet.

Ralph
