Subject: Studsvik Unloading - Update

Unloading of the second Studsvik cask (#606) is complete! Decontamination of the cask is commencing. Paperwork and arrangements for the return shipment of both casks are currently underway. Many thanks go to all who worked (and continue to work) on this project -- great job!

FYI -- I had Dave place all of the Studsvik shipping tubes into pipe nipples labeled with both the Studsvik ID # and our A/G # according to page 1 of procedure IPS-469-00-01. All pipes are located in Floor Hole #3 in IML Cell #3. I had Dave place the four M5 segments in Tier #1 (Can # 303) and the four Zirlo segments in Tier #2 (Can #302) of Floor Hole #3.

Best regards,
Rob
