Farouk,

I think we need an urgent meeting with Tom Martin about the Argonne situation. My proposal is to arrange a very high-level NRC call to Rosner at ANL to ask for a 6-month delay in implementing his decision. Studsvik planned such a delay for SCIP when they shut down R2. During that time we can run a few integral tests and defuel a lot of cladding so separate-effect tests can be subsequently run in the lower level hot cell that is not affected.

As we discussed, NRR needs to take the lead on this or we will probably not succeed.

For our meeting, I would invite the following in the following order of importance:

- Frank Akstulewicz
- Jerry Wermiel
- Paul Clifford
- Harold Scott
- Pat Baranowsky
- John Voglewede

Ralph
