Greg:

I know it is a desire to get a comprehensive baseline for the various monitoring wells.

I do not know if someone has actually "planned" this exercise (sampling all wells on site) yet. To sample everything on-site in a split fashion will take several days because of the purge times, and NEM personnel impacts. Hopefully someone has taken this into consideration. Also many wells have had recent split samples (such as Feb 7).

I will forward this information to Bill Axelson and hopefully we can do this in stages, or in an organized fashion. Also if we are going to do this I will recommend the State representative be present as they request fast shipping of the samples that is hard to coordinate based on the shipping preparations and other schedule plant activities.

Thanks for the information.

I spoke with John White last Friday and he mentioned that either this week or next we'd be doing another round of split samples. My understanding is that we'd be getting all the wells on site. Do you know if and when that's planned?

Greg:

We have just packaged, and sent out, the State samples (8-1000 ml sample bottles) for MW-37 that you participated with on Friday March 10, 2006.

The NRC split samples (4-1000 ml sample bottles) are with Bill Scholtens. Bill is making up the NRC shipping papers. We will keep you informed when they are ready for your observation and paperwork review prior to being shipped to the NRC lab.

A/12/

Thanks again for your participation last Friday in this effort.

Ron Sachatello
