United States Nuclear Regulatory Commission
Document Control Desk
Washington, DC 20555

Dear Sir:

Subject: Salem Generating Station Unit 2
Docket Number 50-311
License Change Request S05-15
Maximum Allowable Power
With Inoperable Steam Line Safety Valves

PSEG Nuclear LLC submitted the proposed change to the Salem Unit 2 Technical Specifications by letter to the NRC dated April 6, 2006. The proposed amendment would reduce the maximum allowable reactor power level with two inoperable Main Steam Safety Valves. This change is consistent with the safety analyses performed to support the Salem Unit 2 Steam Generator Replacement Project.

The BNE has no comments on the proposed change. If you need to discuss this subject further, please contact Elliot Rosenfeld at (609) 984-7548.

Sincerely,

Kent W. Tosch, Manager
Bureau of Nuclear Engineering
