Re: NRC License 09-30873-01, CPN Model CPN 131

Dear Ms. Johanson:

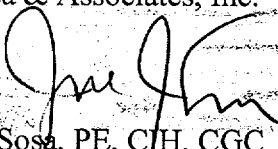

03036486

This is a follow up to our permit for the above referenced Density Gage. The probe is still in Andros Island, Bahamas. The work should be complete this week of March 3, 2006. The Gage should be returning to the states and is being bought back by the Manufacture CPN.

This should be taking place between the 13<sup>th</sup> and the 16<sup>th</sup> of March, 2006. The Gage will be taken to Port Canaveral and kept on the military side of the base. CPN will then take the Gage to their office in California for inspection. After the inspection they will take position of the unit and will put it under their radiation license.

If you have a need for additional Information, do not hesitate to contact Mr. Provost or myself at 813-888-6525.
