#### PURPOSE

#### BACKGROUND

#### GUIDANCE

#### **SECTION 1 - PROCEDURAL GUIDANCE**

1.1 - Processing Extended Power Uprate Applications Figure 1.1-1 - EPU Process Flow Chart

#### **SECTION 2 - TECHNICAL REVIEW GUIDANCE**

2.1 - Reviewing Extended Power Uprate Applications

Matrix 1 - Materials and Chemical Engineering

Matrix 2 - Mechanical and Civil Engineering

Matrix 3 - Electrical Engineering

Matrix 4 - Instrumentation and Controls

Matrix 5 - Plant Systems

Matrix 6 - Containment Review Considerations

Matrix 7 - Habitability, Filtration, and Ventilation

Matrix 8 - Reactor Systems

Matrix 9 - Source Terms and Radiological Consequences Analyses

Matrix 10 - Health Physics

Matrix 11 - Human Performance

Matrix 12 - Power Ascension and Testing Plan

Matrix 13 - Risk Evaluation

### SECTION 3 - DOCUMENTATION OF REVIEW

3.1 - Documenting Reviews of Extended Power Uprate Applications

3.2 - Boiling-Water Reactor Template Safety Evaluation

Insert 1 - Materials and Chemical Engineering

Insert 2 - Mechanical and Civil Engineering

Insert 3 - Electrical Engineering

Insert 4 - Instrumentation and Controls

Insert 5 - Plant Systems

Insert 6 - Containment Review Considerations

Insert 7 - Habitability, Filtration, and Ventilation

Insert 8 - Reactor Systems

Insert 9 - Source Terms and Radiological Consequences Analyses

Insert 10 - Health Physics

Insert 11 - Human Performance

Insert 12 - Power Ascension and Testing Plan

Insert 13 - Risk Evaluation

3.3 - Pressurized-Water Reactor Template Safety Evaluation

Insert 1 - Materials and Chemical Engineering

Insert 2 - Mechanical and Civil Engineering

Insert 3 - Electrical Engineering

Insert 4 - Instrumentation and Controls

Insert 5 - Plant Systems

Insert 6 - Containment Review Considerations

Insert 7 - Habitability, Filtration, and Ventilation

Insert 8 - Reactor Systems

Insert 9 - Source Terms and Radiological Consequences Analyses

Insert 10 - Health Physics

Insert 11 - Human Performance

Insert 12 - Power Ascension and Testing Plan

Insert 13 - Risk Evaluation

#### **SECTION 4 - INSPECTION GUIDANCE**

4.1 - Inspection Requirements

\*The staff is currently finalizing SRP Section 14.2.1. While this SRP Section is being finalized, the staff will continue to use the version issued for interim use and public comment in December 2002. Once finalized, the staff will use the new version.

## 2.12 Power Ascension and Testing Plan

### 2.12.1 Approach to EPU Power Level and Test Plan

### **Regulatory Evaluation**

The purpose of the EPU test program is to demonstrate that SSCs will perform satisfactorily in service at the proposed EPU power level. The test program also provides additional assurance that the plant will continue to operate in accordance with design criteria at EPU conditions. The NRC staff's review included an evaluation of: (1) plans for the initial approach to the proposed maximum licensed thermal power level, including verification of adequate plant performance, (2) transient testing necessary to demonstrate that plant equipment will perform satisfactorily at the proposed increased maximum licensed thermal power level, and (3) the test program's conformance with applicable regulations. The NRC's acceptance criteria for the proposed EPU test program are based on 10 CFR Part 50, Appendix B, Criterion XI, which requires establishment of a test program to demonstrate that SSCs will perform satisfactorily in service. Specific review criteria are contained in SRP Section 14.2.1.

### **Technical Evaluation**

[Insert technical evaluation. The technical evaluation should (1) clearly explain why the proposed changes satisfy each of the requirements in the regulatory evaluation and (2) provide a clear link to the conclusions reached by the NRC staff, as documented in the conclusion section.]

### **Conclusion**

The staff has reviewed the EPU test program, including plans for the initial approach to the proposed maximum licensed thermal power level, transient testing necessary to demonstrate that plant equipment will perform satisfactorily at the proposed increased maximum licensed thermal power level, and the test program's conformance with applicable regulations. The staff concludes that the proposed EPU test program provides adequate assurance that the plant will operate in accordance with design criteria and that SSCs affected by the proposed EPU, or modified to support the proposed EPU, will perform satisfactorily in service. Further, the staff finds that there is reasonable assurance that the EPU testing program satisfies the requirements of 10 CFR Part 50, Appendix B, Criterion XI. Therefore, the NRC staff finds the proposed EPU test program acceptable.
