

2005 October SONGS NRC Written Exam Exam Item Analysis

Analysis items selected using ES-403-1 guidelines. Number 6 "...;evaluate validity of questions missed by half or more of the applicants." Exam item analysis identified the following questions as being missed by half or more of the ROs and SROs applicants for questions 1-75, or in the case of the SRO only questions 76-100, questions missed by half or more of the SRO applicants only.

Question #37 65% failure rate

This question was found to be technically valid. One distracter was selected, which could indicate a common mis-conception in the topic area and/or test taking techniques. Examinees will be provided with remedial training focused on Steam Bypass Control System (SBCS). The training program will be evaluated for inclusion of these weaknesses.

Question #70 65% failure rate

This question was found to be technically valid. Two different distracters were selected, which would indicate a generic weakness in this topic area. Examinees will be provided with remedial training focused on Source Range Nuclear Instrumentation OPERABILITY and the applicable Technical Specifications. The training program will be evaluated for inclusion of these weaknesses.

SRO-only Question #92 77% failure rate

This question was found to be technically valid. Three different distracters were selected, which could indicate a generic weakness in this topic area. Examinees will be provided with remedial training focused on RCS Pressure Safety Limit Basis. The training program will be evaluated for inclusion of these weaknesses.

SRO-only Question #98 50% failure rate

This question was found to be technically valid. Three different distracters were selected, which could indicate a generic weakness in this topic area. Examinees will be provided with remedial training focused on 10CFR100 Radiation Release limits. The training program will be evaluated for inclusion of these weaknesses.

SRO-only Question #99 83% failure rate

This question was found to have some technical issues. The fire burning for 20 minutes meets the threshold for an Unusual Event, which was the distracter. The information in the stem identifying the control room being evacuated was intended for the correct answer to be an Alert but lacked the information as to whether or not control of shutdown systems was established locally or at the shutdown panel. The question will be modified prior to future use. The training program will be evaluated for inclusion of these weaknesses.
