Attached is the DRS report input for Dresden Nuclear Power Station Inspection Report No. 50-237/01-20(DRP); 50-249/01-20(DRP). This input provides the results of a recent inspection of the licensee's radiological effluent monitoring and control program under the public radiation safety cornerstone. This input also documents the results of an allegation review performed by the licensee as requested by the region, related to a high radiation area access control issue. I have reviewed this input and have determined it is ready for distribution to the licensee and dissemination to the public.

After your concurrence, please return this hard copy to me, and we will email the electronic version to you.
