Steve,

Are you asking for the 2006 leak or the 2004 leak? Answering for 2004 will be difficult because we'll probably be relying on memory. I've asked Desiree to provide me with an answer for 2006. However, in the mean time, the first item I have in my records was on Friday 2/10/06, Desiree sent in AR 00452084 on increasing tritium in well samples. This AR (Action Request) was written on 2/9. She included me, Wayne, and Allan Barker on cc for the AR. By this time, Braidwood was well underway. By Monday 2/13, Dresden was being included in EDO bullets and Ken Riemer and Mark Mitchell of your staff were informed/involved in tracking Dresden, also. Other than informing folks, adding Dresden to PN, etc. we did not do anything until 2/16 when Desiree observed the licensee conducting the sampling. Is this what you're looking for?

Mark,

Do we have any information as to when the NRC was informed of the contamination and what we did?

Steve

Steve,

Rough timeline for 2004 and 2006 tritium leakage at Dresden is attached to support the Green ticket response. Please let us know if you need anything additional.

-Mark
