Tritium Contamination Update

Outside the scope

Dresden

The licensee continues its efforts to repair the leak in the underground HPCI return line from the condensate storage tank. The licensee is near completion of its shoring up of the tank such that work can begin on the piping. Since the time that the line was isolated, tritium levels have generally decreased in the onsite groundwater measurements.

Exelon Split/Independent Sampling Program

Region III is beginning an independent and split sampling/analysis program with each site in the Midwest Exelon system, including Zion. The focus of the program is to provide independent validation of the licensee's sampling and analysis program for water samples. Region III plans to obtain onsite and offsite (REMP) water samples (groundwater, surface water, etc.) for comparison with Exelon results.
