## Flaw Evaluation

- If a relevant indication is discovered during a Section XI ISI inspection, and the flaw is dispositioned by analysis, a TLAA will be conducted to determine if the flaw will exceed the acceptance criteria during the life of the component.
- If the flaw exceeds the acceptance criteria, and the decision is made to embed the flaw using a weld overlay, the embedded flaw, it results in the creation of a new TLAA.
- Has Oyster Creek dispositioned any relevant indications by analysis and has Oyster Creek conducted a TLAA for the relevant indication?
- Has Oyster Creek used a weld overlay to embed any relevant indications and have they conducted a TLAA for this situation?
