**Subject:** CORRECTIONS TO FORM 7 APPLICATION

In accordance with our telephone conversation concerning the NSSI application for an export permit for Tritium that was sent to the NRC on February 23, 2006, please make the following corrections to the form 7. Incorrect dates were placed in several of the blocks.

Block 6 shows a Final Shipment Scheduled date of "12/31/06". Please correct the date to show 12/31/10.

Block 8 shows the Proposed License Expiration Date as "05/01/06". Please correct the date to show 01/01/11.

With respect to the NSSI license L02991, the license has been on timely renewal since June 30, 2003. The agency continues to issue amendments for additional activities and quantities of nuclides as needed during the period of timely renewal. NSSI has submitted an amendment request to increase the Tritium possession authorization to 25,000 Curies. That amendment is expected to be issued this week.

NSSI has asked the agency when NSSI could expect formal reissuance of License L02991. The agency has indicated that they hope to accomplish reissuance of the license sometime during 2007. Questions concerning the license renewal can be directed to Dave Fogel 512 834-6770 extension 2203

Sorry for the delay in forwarding this correction request. If you need any additional information or corrections in order to complete consideration of the export application, please contact me.
