That will be fine.

I sat down with Wayne and John yesterday to talk Braidwood status. John is going to the site on Thursday. We also discussed the current priorities for him and DRP relative to the inspection plan - I think they had a more long term view (e.g., waiting for the licensee's root cause) - by indicated that DRP needed in the short to follow-up on the material/pipe integrity issues, and we needed to fully understand the licensee's current sampling plan, dose assessment status, recovery plans, and confidence regarding the origin and current status of any potential leak. You may have some additional thoughts, and may want to touch base with them. You should have seen my email on preliminary ORISE sample results.

I will be in HQ tonight and returning tomorrow. Hope all is going well in the training. Are you planning on staying any this week to see additional sights?

Anne,

Given the Braidwood Tritium, [REDACTED] and other issues, I plan to be in the office Monday and would like to plan on about 6-8 hours of OT. Is that acceptable? (I'll prepare the appropriate paper work next week.)

outside scope

Thank you,

Steve
