FYI

I have asked Gene Bonano to send the following sample to ORISE for analysis:

Plus the 1 sample Greg Roach collected at the Serratt well on 12/27.

These samples were selected to bracket the (positive) analysis range for split sample comparison. The number of samples are biased at the high end as this contains the most risk significant population.

I have also placed the spreadsheet so that it can be accessed while I am out of the office. It can be found here:
