OFFICE OF SECRETARY
 RULEMAKINGS AND
 ADJUDICATIONS STAFF

MEMORANDUM TO: Administrative Judge Lawrence G. McDade
 Presiding Officer
 Atomic Safety and Licensing Board

Administrative Judge Dr. Paul B. Abramson
 Special Assistant
 Atomic Safety and Licensing Board

Administrative Judge Dr. Richard E. Wardwell
 Special Assistant
 Atomic Safety and Licensing Board

FROM: Scott C. Flanders, Deputy Director 
 Environmental and Performance Assessment Directorate
 Division of Waste Management
 and Environmental Protection
 Office of Nuclear Material Safety
 and Safeguards

SUBJECT: NEW INFORMATION POTENTIALLY RELEVANT AND
 MATERIAL TO LICENSING BOARD PROCEEDING IN
 THE MATTER OF USEC INC.

Pursuant to the Commission Policy on Notification to Licensing Boards or the Commission of new relevant and material information, the staff has determined that the following document is potentially relevant and material to the USEC Inc. proceeding and is forwarding it herewith as an enclosure to this memorandum: "Environmental Impact Statement for the Proposed American Centrifuge Plant in Piketon, Ohio," (NUREG-1834). The Nuclear Regulatory Commission's (NRC's) Notice of Availability, "USEC Inc.'s Proposed American Centrifuge Plant; Notice of Availability of Final Environmental Impact Statement (FEIS)" was published in the *Federal Register* on Monday, May 15, 2006 (71 FR 28055) and the official Notice of Availability was published by the Environmental Protection Agency on Friday, May 19, 2006 (71 FR 291).

This document describes the staff's environmental review of the USEC Inc.'s proposed American Centrifuge Plant in Piketon, Ohio. Based on the evaluation in the FEIS, the NRC environmental review staff has concluded that the proposed action would have small effects on the physical environment and human communities with the exception of: (1) short-term moderate impacts associated with increases in particulate matter released to the air during the construction phase, (2) short-term moderate impacts related to increased traffic congestion during the construction phase, (3) potential moderate impacts due to transportation accidents, (4) potential moderate impacts from facility operation accidents, (5) moderate impacts associated with a potential operating extension of the U.S. Department of Energy depleted

uranium tails conversion facility, and (6) moderate employment impacts on the local communities associated with the construction and operation phases.

After weighing the impacts, costs, and benefits of the proposed action and comparing alternatives, the NRC staff, in accordance with 10 CFR 51.91(d), set forth their final recommendation regarding the proposed action. The NRC staff recommend that, unless safety issues mandate otherwise, the action called for is the approval of the proposed action (i.e., issue a license). NRC staff in the Division of Fuel Cycle Safety and Safeguards are currently completing the safety review for USEC's license application which is currently scheduled for completion in July 2006.
