June 14, 2006

Dear Chief,

The relicensing environmental scoping meetings held in Brattleboro, VT, June 7, 2006 continue to demonstrate the control that the NRC exercises over the people of this country. I am reminded continually of the fact that democracy and nuclear technology are incompatible.

One size fits all (generic review) makes no sense in the atomic age with so many variables. The people deserve a higher level of review (including safety issues) between nuclear reactors and their environs.

Continued and increasing releases of radioactive materials at nuclear

THOMAS A. WILSON, D. D. S.

SHELBURNE FALLS,  
MASSACHUSETTS 01370

reactor sites is counterintuitive as is expanding on site high level radioactive waste storage. The only way to deal with this toxic waste is to stop generating it.

I am outraged at the limited scope of evacuation planning - not that evacuation will help us - and the idea of relicensing an aging reactor with embrittlement and cracks in components and backup safety systems.

Vermont Yankee is vulnerable to terrorism.

The idea of the power increase (update) was another bit of insanity.

Sincerely,  
Thomas A. Wilson
