Re: Sr-90 Device

Dear Mr. Momyer,

According to archived computer disposal records, Applied Health Physics, Inc. (AHP) took possession of (1) generally licensed thickness gauge from the Wheeling-Pittsburgh Steel Yorkville, Ohio facility on April 23, 1998. The 25 millicurie Sr-90 source holder was removed and shipped to TN Technologies for disposal on May 4, 1998. I specifically remember the transfer because AHP still has the "C" Frame in our warehouse for training purposes.

The label from the original device is still here and contains the following information:

Model:	U-4 S-14
Activity/Isotope	25 mCi SR-90
Date Measured:	57-05
Test Interval:	6 months
Serial # ?	S-419-K

AHP files from pre 2000 are stored in a warehouse and not easily accessed. I hope that this will satisfy your request.

Todd Mobley
