Subject: Discussion of schedule for finalizing CNS SW/GW performance issue

Dave, I would like to discuss with you the timeline for concluding the significance of the SW/GW alignment performance issue at CNS.

In particular, we are seeking additional information from the vendor to establish pump degradation following temporary loss of GW flow to the pump.

It is important to factor in the amount of time available to obtain vendor evaluation of this postulated condition.

I will call at 10:30am tomorrow morning, June 23.

Please advise, if this is acceptable.

Thanks.
