MFN 06-194

Docket No. 52-010

June 28, 2006

U.S. Nuclear Regulatory Commission
Document Control Desk
Washington, D.C. 20555-0001

Subject: **Seismic Models for the ESBWR Reactor/Fuel Building Complex (RBFB) and Control Building (CB)**

Enclosure 1 contains revised seismic models for the RBFB and CB as requested by the NRC for use in performing confirmatory analyses. An earlier version of this information was provided to the NRC during the Seismic Audit conducted during the week of June 5, 2006. Please see ReadMe.pdf in Enclosure 1 for a description of the data.

If you have any questions about the information provided here, please let me know.

Sincerely,

Kathy Sedney for

David H. Hinds
Manager, ESBWR

D068

Enclosure:

1. MFN 06-194 - Seismic Models for the ESBWR Reactor/Fuel Building Complex (RBFB) and Control Building (CB)

cc: WD Beckner USNRC (w/o enclosures)
AE Cubbage USNRC (with enclosures)
LA Dudes USNRC (w/o enclosures)

ENCLOSURE 1

MFN 06-194

Seismic Models for the ESBWR Reactor/Fuel Building Complex (RBFB) and Control Building (CB)

File RBFB_Model.pdf: This file contains RBFB seismic model data.

File RBFB_Fix_1.txt: This files contains DAC3N input/output listing of fixed base eigenvalue analysis for the RBFB model including the RPV and vertical floor oscillators.

File RBFB_Fix_2.txt: This files contains DAC3N input/output listing of fixed base eigenvalue analysis for the RBFB model without the RPV and vertical floor oscillators.

File CB_Model.pdf: This file contains CB seismic model data.

File CB_Fix_1.txt: This files contains DAC3N input/output listing of fixed base eigenvalue analysis for the CB model including vertical floor oscillators.

File CB_Fix_2.txt: This files contains DAC3N input/output listing of fixed base eigenvalue analysis for the CB model without vertical floor oscillators.

Shimizu Engineering Report

Project	General Electric Company ESBWR Project	Shimizu Document No.	SER-ESB-023
Title	Revised Reactor/Fuel Building Complex Stick Model	Rev.	0
		Issued Date	6/22/06
		Revised Date	

NOTE:

This document provides the revised Reactor/Fuel Building Complex (RBFB) stick model in response to NRC's Audit comment on RAI 3.7-36.

The following are revised portions from the original DCD model.

1) Add vertical shear spring to consider the vertical coupling of walls through the upper pool deep girders.
2) Add vertical shear springs to consider the vertical coupling of walls through the floor slabs.

Tables 1 through 13 and Figures 1 and 4 show the model properties. The above revised portion is included in Table 1.

Appendix A shows evaluation of vertical shear spring.
Appendix B shows eigenvalue analysis results.
Appendix C shows additional information requested by NRC for the preparation of SASSI model.

In addition, the revised model properties in DAC3N text format are provided separately as follows.

1) RPV and floor oscillators are modeled as it is. (final seismic analysis model)
2) RPV and floor oscillators are eliminated. RPV weights are added to No.711 and floor oscillators weights are added to the nodes which they are attached to. (This model is used for the eigenvalue analysis in Appendix B)

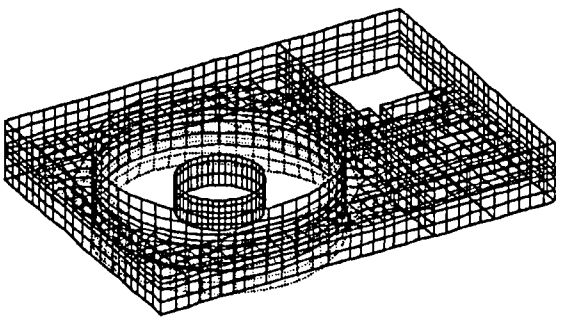
Appendix A Evaluation of Additional Vertical Springs

- Pool Girder spring
  Stiffness is calculated by the following equation.

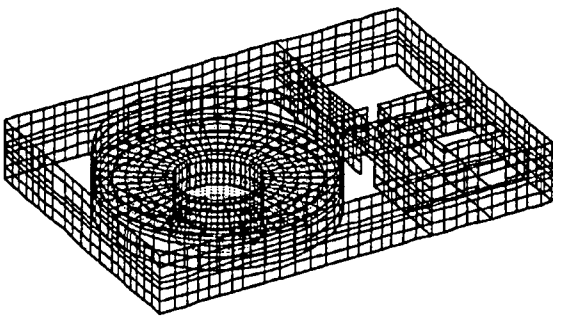
$$K = \sum \frac{GA}{L}$$

  where,
  G: Shear stiffness of concrete (1.187×10^4 MN/m^2)
  A: Section area of Pool Girder (thickness*height)
  thickness : 1.6m
  height : 9.4m
  L: Length of Pool Girder (between RCCV and outer wall)
  R1-R2 4.7m
  R6-R7 6.0m
  Calculated stiffness is $K = 6.772 \times 10^4$ MN/m

- Floor Slab & Suppression Pool Slab
  Stiffness is evaluated by FE analysis using partial floor model at EL 4650.



FE Model for Floor Slab
(S/P slab elements are deleted.)



FE Model for Suppression Pool Slab
(Floor slab elements are deleted.)

Calculated stiffness is $K = 1.348 \times 10^4$ MN/m (for floor slab of 1.0m thick)
$K = 6.773 \times 10^3$ MN/m (for Suppression Pool slab)

Appendix B Eigenvalue Analysis Results

Analysis Model Conditions

- Fixed base case
- Eliminate floor oscillators and their weights are added to the nodes which they are attached to.
- RPV is eliminated and its weight (21413kN) is added Node No.711.

It was confirmed from the results that the number of dynamic degrees of freedom is no less than twice the number of modes below the cutoff frequency, 50Hz. (reference : RAI 3.4-24)

Shimizu Engineering Report

Project	General Electric Company ESBWR Project	Shimizu Document No.	SER-ESB-024
Title	Revised Control Building Stick Model	Rev.	0
		Issued Date	6/22/06
		Revised Date	

NOTE:

This document provides the revised Control Building (CB) stick model in response to NRC's Audit comment on RAI 3.7-36.

The followings are revised portions from the original DCD model.

1) Add a mass in the middle of each stick connecting between the adjacent floors.
2) Add a mass on the roof floor to model the penthouse dynamic behavior.

Tables 1 through 3 and Figures 1 and 2 show the revised model properties.

Appendix A shows eigenvalue analysis results.
Appendix B shows additional information requested by NRC for the preparation of SASSI model.

In addition, the revised model properties in DAC3N text format are provided separately as follows.

1) Floor oscillators are modeled as it is. (final seismic analysis model)
2) Floor oscillators are eliminated and their weights are added to No.5. (This model is used for the eigenvalue analysis in Appendix A)

Appendix A Eigenvalue Analysis Results

Analysis model conditions are follows.

- Fixed base case
- Eliminate floor oscillators and add their weights to Node 5.

It was confirmed from the results that the number of dynamic degrees of freedom is no less than twice the number of modes below the cutoff frequency, 50Hz. (reference : RAI 3.4-24)
