**Subject:** Comments for ESP and additional cooling towers

Dear Sirs:

I believe the increased power level of the North Anna 2- proposed generation units is justified due to the fact that the cooling will now be done by cooling towers rather than the existing lagoon. I have experience with cooling towers on other generation units and find that they are an acceptable way of expelling waste heat to the environment without adverse effects. In my experience, the noise of the cooling units is minimal for a power plant and the other operating steam and water pumps drown out the noise of these towers.

I think you will do well to approve this early site permit and let Dominion build the extra generation when it is needed. Energy is becoming a very expensive item in the world and electric power supplied by these units will be critical to Virginia and the Nation in the future!
