Mr. Patrick R. Tyson
Acting Assistant Secretary for
Occupational Safety and Health
Department of Labor
Washington, D.C. 20210

Dear Mr. Tyson:

We have received the case file of the OSHA investigation into the accidental
UF₆ release at the Sequoyah Fuels plant transmitted by your letter of
March 13, 1986.

These documents are currently under NRC review. To date, this review shows
that most OSHA findings and proposed citations are in areas where the NRC
has determined that noncompliance with NRC requirements or deviation from
accepted industry practice existed.

All OSHA findings will be considered and incorporated to the extent possible
into any enforcement action NRC proposes for violations or deviations found
related to the accident or from inspections and investigations performed after
the accident.

Thank you for providing these files for our use.

Sincerely,

James M. Taylor, Director
Office of Inspection and Enforcement

Dear Mr. Tyson:

We have received the case file of the OSHA investigation into the accidental UFG release at the Sequoyah Fuels plant transmitted by your letter of March 13, 1986.

These documents are currently under NRC review. To date, this review shows that most OSHA findings and proposed citations are in areas where the NRC has determined that noncompliance with NRC requirements or deviation from accepted industry practice existed.

All OSHA findings will be considered and incorporated to the extent possible into any civil penalties NRC proposes for violations or deviations found related to the accident or from inspections and investigations performed after the accident.

Thank you for providing these files for our use.

Sincerely,

James M. Taylor, Director
Office of Inspection and Enforcement
