Re: Materials license number 37-30086-01 amendment request

03033333

Dear Sir:

This letter serves as a request to amend our existing USNRC Materials License, number 37-30086-01.

With regard to item 6.B. Depleted Uranium, we shall not acquire any additional Depleted Uranium of any weight or form beyond what we already possess (current inventory list submitted to USNRC in February, 2006).

With regard to the safe storage and handling of existing Depleted Uranium inventory, we commit to maintaining said inventory in secure, locked room at our facility at 15 Alliance Street, New Philadelphia, Pennsylvania. Access to this room will be limited to authorized personnel including Radiation Safety Officer, Physics Staff, and other select staff as needed for inventory and contamination control purposes. Handling of Depleted Uranium material shall be limited to only that which is necessary for the purposes of periodic inventory audit and annual wipe tests by physic staff.

Wipe tests will be performed by a qualified physicist on an annual basis and results of such tests will be kept on file at this facility with materials license and inventory lists.

A quarterly audit of the inventory shall be conducted and records of such audits will be kept on file at this facility with materials license and previous inventory audits.

Any disposal of existing Depleted Uranium shall be performed by an appropriately licensed handler and depository. USNRC shall be notified in writing in advance of any plans for disposal.

139216  
NMCS/RGNI MATERIALS-002

If you have any questions regarding this amendment request, please contact me or my administrator, Robert Beauvais at 610-428-9700.

Thank you,

David J. Moylan, M.D., R.S.O.
