SUBJECT: FORT CALHOUN STATION - NRC SECURITY INSPECTION REPORT  
05000285/2006008

Dear Mr. Ridenoure:

On July 20, 2006, the U.S. Nuclear Regulatory Commission (NRC) completed a security baseline inspection at your Fort Calhoun Station. The inspection covered one or more of the key attributes of the security cornerstone of the NRC's Reactor Oversight Process. The enclosed inspection report documents the inspection results, which were discussed on **July 20, 2006**, with Mr. Jeff Reinhart, Site Director, and other members of your staff.

The inspection examined activities conducted under your license as they relate to security and compliance with the Commission's rules and regulations and with the conditions of your license. The inspectors reviewed selected procedures and records, observed activities, and interviewed personnel.

This report documents one finding of very low security significance (i.e., Green as determined by the Physical Protection Significance Determination Process). The report also documents a licensee-identified violation which was determined to be of very low security significance. The deficiencies were promptly corrected or compensated for, and the plant was in compliance with applicable physical protection and security requirements within the scope of this inspection before the inspectors left the site.

**WARNING:** Violation of Section 147 of the Atomic Energy Act, protection requirements for "SAFEGUARDS INFORMATION," is subject to civil and criminal penalties.
