SUBJECT: MIDCYCLE PERFORMANCE REVIEW AND INSPECTION PLAN -
COOPER NUCLEAR STATION

Dear Mr. Edington:

On August 8, 2006, the NRC staff completed its performance review of the Cooper Nuclear Station (CNS) for the first half of the calendar year 2006 assessment cycle. Our technical staff reviewed performance indicators for the most recent quarter and inspection results over the previous 12 months. The purpose of this letter is to inform you of our assessment of your safety performance during this period and our plans for future inspections at your facility in order for you to inform us of any planned inspections that may conflict with your plant activities.

This performance review and enclosed inspection plan do not include physical protection information. A separate letter designated and marked as "Official Use Only - Security-Related Information" will include the physical protection review and resultant inspection plan.

Plant performance for the most recent quarter was within the Licensee Response Column of the NRC's Action Matrix, based on all inspection findings being classified as having very low safety significance (Green) and all performance indicators indicating performance at a level requiring no additional NRC oversight (Green). Therefore, we plan to conduct reactor oversight process baseline inspections at your facility.

In our annual performance assessment letter dated March 2, 2006, we advised you that the substantive crosscutting issue in the area of problem identification and resolution would remain open based on a recurring theme, involving inadequate corrective actions resulting in repetitive problems which impact plant operation. We indicated that despite the extensive focus in this area, consequential plant issues continued to occur. We also noted that your staff had developed a performance improvement plan in the latter part of 2005 to address performance in this area. Based on our review of the inspection results for this current period, the NRC has concluded that this substantive crosscutting issue can be closed. Although the NRC continued to identify inspection findings in the area of problem identification and resolution, we noted improved performance as demonstrated by a reduction in the number of repetitive problems that impacted plant operation. Specifically, we noted improvements in the effectiveness of corrective action to address plant issues, the equipment trending program, and the use of

operational experience to identify problems at CNS. As a result, only two NRC inspection findings identified in the first 6 months of 2006 had crosscutting aspects associated with problem identification and resolution. Consequently, no additional focused inspections are planned within this area.

With the exception of inspections related to physical protection, the enclosed inspection plan details the inspections, including Temporary Instructions, scheduled through March 31, 2008. The inspection plan is provided to minimize the resource impact on your staff and to allow for the early resolution of any scheduling conflicts and personnel availability issues well in advance of inspector arrival onsite. Routine resident inspections are not listed due to their ongoing and continuous nature. The inspections in the last 9 months of the inspection plan are tentative and may be revised at the annual performance review meeting.

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be made available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Public Electronic Reading Room).

If circumstances arise which cause us to change the inspection plan, we will contact you to discuss the change as soon as possible. Please contact me at (817) 860-8144 with any questions you may have regarding this letter or the inspection plan.

Sincerely,

Kriss M. Kennedy, Chief
Project Branch C
Division of Reactor Projects
