## AmerGen Comments on the Draft Generic Environmental Impact Statement for License Renewal of Nuclear Plants, Supplement 28 Regarding Oyster Creek Nuclear Generating Station

Page # / Line #	What is in DEIS	What it should be changed to	Why
2-8 / 13 - 14	The low-flow axial pump design allows for some impingement and entrainment survivability.	The low head axial pump design allows for some impingement and entrainment survivability	The dilution pumps are of a high flow design.
2-83 / 18 - 20	Revenues are used by each taxing entity to fund local and county emergency management programs, public safety, local public schools, local government operations, local road maintenance, and the local library system.	Revenues are used by each taxing entity to fund local and county emergency management programs, public safety, local public schools, local government operations, local road maintenance, and the local library system.	Funding for local and county emergency management programs is funded by a levy placed on AmerGen by NJ under the Radiation Protection Act, not through local taxing entities.

## AmerGen Comments on the Draft Generic Environmental Impact Statement for License Renewal of Nuclear Plants, Supplement 28 Regarding Oyster Creek Nuclear Generating Station

Page # / Line #	What is in DEIS	What it should be changed to	Why
4-25 / 35 37	This line is not considered within the scope of license renewal because it was not constructed for the specific purpose of connecting the station to the grid at the time of initial station licensing.	The Conectiv line should be included within the scope for analysis of impacts for this proposed action.	This line should be included in scope. It is Exelon's understanding that National Environmental Policy Act (NEPA) court cases and Council on Environmental Quality guidelines indicate that scope should include connected actions, which include actions that will not proceed unless other actions are taken [40 CFR 1508.25(a)(ii)]. Operation of the new line is as much connected to Oyster Creek Generating Station operation as operation of the line currently considered in the DEIS.
