Dear Mr. Strosnider:

I have just remembered this additional information in support of my most recent petition, in particular the claim that urine monitoring for uranium inhalation exposures from 1991 is inaccurate:

"Urine assay for UO<sub>3</sub> exposure can be useful, PROVIDED that measurements are made soon after a known acute intake." (CAPS emphasis added) Ansoborlo, E. (1998). "Exposure implications for uranium aerosols formed at a new laser enrichment facility: application of the ICRP respiratory tract and systemic model". Radiation Protection Dosimetry 79: 23-27:

<http://www.bovik.org/du/Ansoborlo98.pdf>

See also Stradling, N. (2003). "Optimising monitoring regimens for inhaled uranium oxides". Radiation Protection Dosimetry 105: 109-114:

<http://www.bovik.org/du/Stradling03a.pdf>

I trust you will find this information "significant" and agree to review my petition by the end of this week so I will not have to sue.

Sincerely,  
James Salsman
