Office of Nuclear Reactor Regulation (NRR)  
Items of Interest  
Week Ending September 15, 2006

Quality Assurance Meeting

On September 6, 2006, the Division of New Reactor Licensing staff conducted a public meeting with industry members of the Nuclear Energy Institute (NEI) quality assurance team. The staff and NEI representatives discussed the draft quality assurance (QA) program template that NEI plans to submit as a Topical Report for NRC review and approval. The goal of the QA program template is to improve review efficiency for new reactor combined license and early site permit applications.

Monthly Reactor Oversight Process (ROP) Meeting

On September 14, 2006, staff hosted the monthly ROP public meeting in Fort Worth, TX. The meeting included discussions on Mitigating Systems Performance Index implementation, safety culture integration into the ROP, performance indicator issues, and open and new frequently asked questions.

Office of Nuclear Material Safety and Safeguards (NMSS)  
Items of Interest  
Week Ending September 15, 2006

Meeting with Omaha Public Power District to Discuss Fort Calhoun Dry Cask Storage

On September 7, 2006, NMSS staff met with Omaha Public Power District (OPPD), to discuss options for Fort Calhoun's next dry cask storage campaign. During the meeting, OPPD expressed interest in pursuing continued use of the lightweight spent fuel transfer cask approved by the staff, through an exemption for limited use at Fort Calhoun. Transnuclear (TN), the storage cask vendor, also attended the meeting, to outline the scope of a Certificate of Compliance (CoC) amendment for the lightweight transfer cask used at Fort Calhoun that TN expects to submit in Spring 2007. The staff noted that OPPD's and TN's proposed schedule did not support issuing an amendment to the CoC by OPPD's stated need date of January 2008. OPPD indicated that it would evaluate its options which includes having TN request an amendment as soon as possible; delaying dry cask loading until after 2008; or seeking another exemption.

Oconee Independent Spent Fuel Storage Installation License Renewal Meeting

On September 12, 2006, NMSS staff met with representatives from the Duke Power Company (DPC) to discuss the licensee's plans to submit a renewal application for the Oconee site-specific independent spent fuel storage installation (ISFSI) license. The Oconee ISFSI uses the Standardized NUHOMS dry cask storage system. Forty modules of the ISFSI are operated under a site-specific license which was issued in January 1990 and will expire in January 2010. DPC also operates part of Oconee ISFSI under the general license (GL) provisions of 10 CFR Part 72. The renewal application will only focus on the site-specific license.

DPC stated that it closely followed the NRC review of the Surry and H. B. Robinson ISFSI license renewals, which were approved in early 2005. DPC intends to apply the same preliminary renewal guidance provided by NRC staff to those licensees and request an exemption to extend the renewal period to 40 years, similar to the exemptions granted to Surry and Robinson. Staff is currently incorporating the previous guidance into a formal Standard Review Plan. DPC plans to submit the Oconee ISFSI renewal application and associated exemption request in the 4<sup>th</sup> quarter of calendar year 2007.

High-Level Waste 4<sup>th</sup> Quarter NRC/Department of Energy (DOE) Management Meeting

On September 12, 2006, a Quarterly NRC/DOE Management Meeting on the high-level waste program was held at NRC Headquarters. This meeting was open to the public, and available by video conference and teleconference. The meeting included NRC and DOE program updates, as well as DOE presentations on the status of its corrective action, licensing, science, design and engineering, and quality assurance programs.

NUREG-1851, "Safety Evaluation Report for American Centrifuge Plant" in Piketon, Ohio  
Issued

On September 11, 2006, NRC issued the subject NUREG. The American Centrifuge Plant is a gas centrifuge uranium enrichment facility that was proposed by USEC Inc. (USEC). The SER documents NRC's safety review of USEC's application in the areas of institutional information; management and organization; the Integrated Safety Analysis; radiation protection; nuclear criticality safety; chemical safety; fire safety; emergency response; environmental; decommissioning; management measures; nuclear material control and accounting; physical security; and transportation security. The SER concludes that USEC has demonstrated it has adequate safety programs to construct and operate the proposed facility.

Office of Nuclear Material Safety and Safeguards Proposed Rule Signed by Executive Director  
for Operations (EDO)

On September 13, 2006, the EDO approved a proposed rule that amends 10 CFR Part 70, "Facility Change Process Involving Items Relied On For Safety." This amendment will clarify a requirement pertaining to items relied on for safety (IROFS). This rulemaking corrects an inconsistency in the regulations pertaining to IROFS.

Office of Nuclear Regulatory Research (RES)  
Items of Interest  
Week Ending September 15, 2006

4<sup>th</sup> International Meeting for Benchmarking of Computational Fluid Dynamics (CFD) Codes for Application to Nuclear Reactor Safety

From September 2-6, 2006, staff attended the subject meeting in Garching, Munich, Germany. Approximately, one hundred participants from nearly all Organization for Economic Cooperation and Development (OECD) / Committee on the Safety of Nuclear Installations (CSNI) member countries attended. The staff gave a keynote address on the tests and results of international standard problem (ISP) no. 43 on boron dilution, served as technical reviewer, and participated in the writing groups that establish the best practice guidelines for CFD.

State-Of-The-Art Reactor Consequence Analyses Public Meeting

On September 8, 2006, staff held the subject meeting with representatives from the Nuclear Energy Institute (NEI), Electric Power Research Institute, Polestar, public stakeholders, and media to provide an overview of the project and discuss the need for plant specific information to support the project. The key steps of the project include: evaluate and update, as appropriate, analytical methods and models for realistic evaluation of severe accident progression and offsite consequences; develop state-of-the-art reactor consequence assessments; and develop an integrated, predictive, computer-based tool to assist decision-making in the event of a severe reactor accident. Additional topics discussed included the objectives, approach, potential uses of the results, schedule, progress, and next steps.

Week Ending September 15, 2006

Award for Metro Transit Fare Media

On August 31, 2006, a fixed price requirements type contract was awarded to the Washington Metropolitan Area Transit Authority, of Washington, DC. The contractor shall provide NRC with public transit fare media, metrochecks and SMARTrip cards, for distribution to qualified NRC employees. The total value of the contract, including all options, is \$2,770,698.00.

Award for Just-In-Time Delivery of Office Supplies

On September 7, 2006, a Blanket Purchase Agreement was awarded to OfficeMax Inc., of Elkridge, MD. The contractor shall provide NRC with office supplies under their GSA schedule. The total estimated cost is \$556,004.81. The period of performance is from September 21, 2006, through September 22, 2007.

Office of Information Services (OIS)
