Nuclear Regulatory Commission
10 CFR Parts 19, 20, and 50
RIN 3150 - AH40
Occupational Dose Records, Labeling Containers, and the Total Effective Dose Equivalent

Comment:

I personally do not agree that the NRC should amend its regulations related to the reporting of annual dose to workers, the definition of the total effective dose equivalent, the labeling of certain containers holding licensed material, or the determination of cumulative occupational radiation dose. While the revisions may reduce the administrative and information collection 'burdens' (this emotional word is propaganda; the NRC should have simply used the term 'work'), the revisions do affect the level of protection to the health and safety of the worker at least, if not the public and the environment. My case for the worker revolves around the negligence in accurate/complete labeling for certain containers holding 'licensed materials' and the disposal of the determining system of cumulative occupational radiation dose. The NRC workers, above all else, deserve the best and most effective protection from a company that daily exposes them to danger.

Thank you.
