Subject: FYI: Pre-construction activities

On October 4, I discussed pre-construction activities for the American Centrifuge Plant (ACP) with Pete Miner of USEC Inc. Pete had previously called me and asked whether certain pre-construction activities could be started, after which I discussed them with you. During my conversation with Pete, I informed him that they can start on the following activities now:

1. internal changes to existing buildings not located on the ACP site (e.g., refurbishment activities, internal utilities work, installing manufacturing equipment) [Note that Pete's initial request was for a specific building, but the this applies to all buildings]
2. installation of security system wiring and detectors in Building 7725 (located on the ACP site in areas of the building that are currently not part of the Lead Cascade) so long as it does not impact the security system for the Lead Cascade.

Pete asked about activities that are planned to be conducted outside of existing buildings not located on the ACP site. I informed Pete that it would depend on the activities performed and that I would get back to him on the specifics he provided concerning a particular building in Oak Ridge.
