

October 26, 2006

MEETING REPORT

Date: Thursday, October 12, 2006

Time: 9:00 AM to 11:30 a.m.

Place: U.S. Nuclear Regulatory Commission(NRC)
11555 Rockville Pike
Rockville, MD 20852
Room T-8A1

Purpose: To discuss placement of monitoring wells at Jefferson Proving Ground

Attendees: Enclosure 1

Background:

As noted in the April 26, 2006 letter regarding License Amendment 13 of License SUB-1435, the NRC and U.S. Army hold periodic meetings at the NRC Headquarters, open to the public, to discuss the Army's progress in completing the site characterization and new decommissioning plan. These meetings are to occur prior to the initiation of significant planned field activities, such as determining the number and location of new monitoring wells. This meeting focused on the Army's progress in characterizing the site and its plans for placement of monitoring wells.

Discussion:

The Army presented a high-level summary of its proposed placement of monitoring wells (Enclosure 2). The NRC staff and the Army discussed issues relevant to the location and installation of the groundwater monitoring wells. The results of this discussion are the basis for the action items.

Action Items:

The NRC staff and the Army agreed that the following action items will be performed by the Army. The responder for the Army will be Paul Cloud. Action items 1, 2, and 3 will be submitted by November 3, 2006, provided that the wells are installed in the Fall of 2006. However, if well installation is postponed to Spring 2007, then by November 3, 2006; the Army will inform NRC staff as to when well installation will start.

1. The Army will submit a report discussing the results of its electrical imaging, soil verification, and stream and cave gauge installation. The Army will provide a summary of its fracture trace analysis report or reference its previously submitted report on this analysis.
2. The Army will provide an addendum to the Field Sampling Plan (FSP) that discusses the well installation procedures; well selection sites; the groundwater, surface water, cave, and sediment sampling procedures; and the radiological and other chemical analyses that will be performed on the sampled media.
3. The Army will indicate when it will start sampling the different media for radionuclides and other chemicals discussed in Action Item 2 and the FSP. The NRC staff believes that groundwater, surface water, cave water, and sediment sampling should be initiated as soon as the conduit wells are installed and developed.
4. The Army and NRC staff will hold a Public Meeting or Teleconference shortly after the second quarterly sampling event for the above mentioned media. The Army will discuss the results of sampling program developed under the FSP and the status of other FSP activities. The Army and NRC staff will also discuss potential modifications in the existing Environmental Radiation Monitoring Program.

Docket No.: 040-08838
License No.: SUB-1435

Enclosure:

1. Meeting Attendees
2. Briefing Slides
