Fran:

I'm doing some research on Connecticut River water quality and I thought the Brattleboro District Office might be able to help.

1. I'm aware that contact recreation on the river in Windham County is uncommon, but I can't determine if there are any officially designated beaches or other areas where people do swim, wade, etc. If there are places where people swim, is the water monitored for the presence of any pathogens such as giardia, E. coli, amoebae, etc.?
2. Is your office aware of any recently reported cases in your district where the patient likely contracted an illness from direct contact with the river water?

Any information you could provide would be most helpful.

Kindest regards,
Bob West

Hi Mr. West -

Fran deFlorio forwarded to me your request for information about river water testing. I am one of the environmental health nurses here in the Brattleboro District office of the Vermont Dept. of Health, so I think I can answer your questions.

The Connecticut River water is tested through the Department of Environmental Conservation by the Water Quality Division. They do bacteriological testing of water from the Connecticut River. You may get information on these tests by calling this number: 1-802-241-3777. I believe the person who does the bacteriological testing is Kelly Merrill.

The VDH does monitor all designated public swimming areas during the swimming season. There are no public swimming areas on the CT river in the Brattleboro District, which goes as far north as Westminster.

In terms of illnesses from direct contact with river water, I have had no cases of illness in the past year in our district that have been linked to the Connecticut River. We have had some giardia cases reported that may have been acquired in other bodies of water, but nothing from the CT river.

Please feel free to contact me if you would like further assistance.
