**SUBJECT: BRAC Industrial Radiation Facility Close-Out and Termination Survey  
Report for Camp Pedricktown, New Jersey**

New Jersey Department of Environmental Protection  
Bureau of Federal Case Management  
Division of Responsible Party Remediation  
ATTN: Mr. Greg Zalaskus, Federal Case Manager  
401 East State Street, CN 028  
Trenton, New Jersey 08625-0028

Dear Mr. Zalaskus:

The Industrial Radiation Historical Data Review Report for Camp Pedricktown, New Jersey identified nine (9) Base Realignment and Closure (BRAC) areas at Camp Pedricktown as areas where radiological materials may have been used and/or stored. Each of these 9 areas have been surveyed for potential radiological contamination. Enclosed for your review is the Industrial Radiation Facility Close-Out and Termination Survey Report for eight (8) of the 9 areas (i.e., Buildings 184, 422, 432, 473, 474, 494, and 495 and the open area in the northwest corner of the base). Also enclosed is an Erratum serving as the survey report for the ninth area (Building 480). The survey results indicate that each of the 9 areas are in compliance with the Nuclear Regulatory Commission (NRC) and State of New Jersey guidelines for the decontamination of facilities prior to release for unrestricted use.

According to the Industrial Radiation Historical Data Review Report, no NRC licenses or Department of the Army Radiation Authorizations (DARAs) were ever issued specifically to Camp Pedricktown or to any units assigned there. According to the U.S. Army Center for Health Promotion and Preventative Medicine (USACHPPM), the licenses issued to the U.S. Army for the radiological materials used or stored in the 9 BRAC areas are the following:

CECOM: 29-01022-14  
IOC: 12-00722-07  
ACALA: 12-00722-06

*Alas*

DEC 22 1998

If you have any comments or questions on the enclosed report, please contact Mr. Richard Sample at (609) 562-3699.

Sincerely,

Linda D. Chominski  
Chief, Engineering & Environmental  
Division, RDPW, U.S. Army Fort Dix
