**Subject: UNUSUAL EVENT DECLARED DUE TO LOSS OF OFFSITE POWER TO UNIT 2 4kV
EMERGENCY BUSES (UPDATE)**

On November 1, 2006, at 6:37 p.m. EST, Brunswick declared an unusual event following a manual scram of Unit 2 as a result of a loss of offsite power to the unit caused by a lockout of the Startup Auxiliary Transformer. Emergency Diesel Generators (EDGs) 3 and 4 auto-started and re-energized the affected electrical buses. EDGs 1 and 2 auto-started but did not tie to their respective buses as the buses remained powered from the Unit 1 Unit Auxiliary Transformer. At approximately 4:00 a.m. EST on November 2, EDG 1 tripped on low lube oil pressure. This condition coupled with an unavailable Unit 2 Startup Auxiliary Transformer required that Unit 1 be in hot shutdown by 4:00 a.m. EST on November 3.

The licensee restored offsite power to Unit 2 by backfeeding through the Unit 2 Auxiliary Transformer, thereby terminating the unusual event at 5:45 p.m. EST on November 2. At 10:23 p.m. EST on November 2, the licensee commenced a shutdown of Unit 1 as required by Technical Specifications. At 1:52 a.m. EST on November 3, with reactor power at approximately 81 percent, the power reduction was stopped when the licensee restored the Unit 2 Startup Auxiliary Transformer service. This restoration transitioned Unit 1 to a 7-day Technical Specification Action Statement for EDG 1 being inoperable. During repair activities, the licensee identified a failed main crankshaft bearing. Repairs have been completed and the EDG is undergoing post-maintenance testing.

The State of North Carolina will be informed. The information in this preliminary notification has been reviewed with licensee management, and is current as of 2:00 p.m. EST on Monday, November 6, 2006.
