MEMORANDUM TO: Douglas W. Weaver, Chief
New Reactor Infrastructure Guidance Development Branch
Division of New Reactor Licensing
Office of Nuclear Reactor Regulation

FROM: Patrick L. Hiland, Director */RA by Kenneth G. O'Brien for/*
Division of Engineering
Office of Nuclear Reactor Regulation

SUBJECT: TRANSMITTAL OF PROPOSED REVISION TO STANDARD REVIEW
PLAN NUREG-0800 SECTIONS 3.9.1, REV 3 AND 3.9.3, REV 2

The purpose of this memorandum is to transmit the proposed revisions to NUREG-0800, Standard Review Plan (SRP), Section 3.9.1, Rev. 3, "Special Topics for Mechanical Components," and Section 3.9.3, Rev. 2, "ASME Code Class 1, 2, and 3 Components and Component Supports, and Core Support Structures," to you for consideration. These documents are technically complete, reformatted in conformance with LIC-200, "Standard Review Plan Process," and are designated "publically available."

In accordance with the staff requirements memorandum dated May 10, 2005, on the April 6, 2005, Commission meeting the Office of New Reactors (NRO) and the Office of Nuclear Reactor Regulation (NRR) have revised SRP Sections 3.9.1 and 3.9.3 (Enclosures). The present sections update Rev 2, dated July 1981 and Rev 3, date June 1996. The revised portions of the SRP Section have been highlighted to aid in identifying the technical information that has been added or revised. Additional changes are summarized on the last page of the SRP section.

In addition, these revisions have been administratively updated in accordance with NRR Office Instruction, LIC-200. The administrative update is comprised of assigning the review responsibilities by function, with the responsible organizations maintained separately from the SRP itself to minimize impacts of office reorganizations, and editorial and formatting changes. The revision also adds standard paragraphs to extend application of the updated SRP section to prospective submittals by applicants pursuant to 10 CFR Part 52.

The staff has determined that the changes do not involve any new staff positions. I understand, that most of the SRP sections will be issued as final versions without publishing them as draft and requesting comment. The staff is revising the SRP in this manner to provide a more up-to-date SRP in light of the requirement in 10 CFR 50.34(h) for an applicant to evaluate its facility against the SRP revision in effect six months before the docket date of the application.

CONTACT: Mark Hartzman, EEMA/DE/NRR

In addition, this memo and its enclosures will be made publically available as preliminary SRP section revisions. They will be formally published following reconciliation against the ongoing Part 52 rulemaking and regulatory guide updates including Regulatory Guide 1.206, "Combined License Applications for Nuclear Power Plants (LWR Edition)." After formal issuance, the SRP will be available for public comment. Comment resolution will be addressed in subsequent SRP revisions. Prior to revision to individual sections, comment resolution may establish a basis for how alternatives to the NUREG-0800 acceptance criteria provide an acceptable method of complying with the NRC's regulations.

For questions concerning these documents, please contact Mark Hartzman at 301-415-2755.
