

STATE OF CONNECTICUT
DEPARTMENT OF EMERGENCY MANAGEMENT
AND HOMELAND SECURITY

James M. Thomas
Commissioner

November 9, 2006

Nader Mamish
Director, Emergency Preparedness Directorate
Mail Stop 06-H2
United States Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Director Mamish:

Although we have not received formal notification (as of September 8, 2006) we understand that the NRC will again be supplying Potassium Iodide (KI) to requesting states. We are anxious to receive the KI tablets as soon as possible so that we may package and distribute the new pills before the old KI expires. Therefore, I am now writing to request a replacement supply of Potassium Iodide (KI) 130mg tablets for the State of Connecticut. This supply will allow us to continue our participation in the KI program established roughly four years ago. This program is an additional protective action for the public included in our Radiological Emergency Response Plan. The plan details Connecticut's offsite emergency preparedness plans for the Millstone Station nuclear power plant located in Waterford, Connecticut.

We are requesting 370,000 tablets (130mg) of IOSAT brand KI to replace the expiring KI that was distributed in 2002 for the population affected by Millstone Station.

The shipment of 130 mg KI tablets should be addressed to:

ATTN: Deborah Ferrari
CT DEMHS
Hartford Armory
360 Broad Street
Hartford, CT 06105

Please feel free to contact us if we have failed to provide adequate information in this letter or if you have any other questions. Contact Deborah Ferrari at 860-566-4577.

Sincerely,

Wayne E. Sandford
Deputy Commissioner

cc: Deborah Ferrari, DEMHS REP Supervisor.
DHS (Robert Swartz, John Price, Robert Poole)
NRC (Patricia Milligan, Kathryn Brock)

CT DEMHS INTERNAL USE ONLY:

Breakdown of KI 130 mg distribution:

	Number of Pills	Comments
General Population	28,000	
Town Stock	50,000	Supplies for town designated distribution sites.
