MEMORANDUM TO: Frank P. Gillespie, Executive Director
Advisory Committee on Reactor Safeguards
Advisory Committee on Nuclear Waste

FROM: Patrick L. Hiland, Director */RA/*
Division of Engineering
Office of Nuclear Reactor Regulation

SUBJECT: TRANSMITTAL OF PROPOSED REVISION TO STANDARD REVIEW
PLAN NUREG-0800 SECTION 3.9.2 REV. 3 AND 3.9.5, REV. 3

The purpose of this memorandum is to transmit the proposed revisions to NUREG-0800, Standard Review Plan (SRP), Section 3.9.2, Rev. 3, "Dynamic Testing and Analysis of Systems, Components, and Equipment," and 3.9.5, Rev. 3, "Reactor Pressure Vessel Internals," to the ACRS for their consideration. These documents are technically complete, reformatted in conformance with LIC-200, "Standard Review Plan Process," and are designated "publically available."

In accordance with the staff requirements memorandum dated May 10, 2005, on the April 6, 2005, Commission meeting, the Office of New Reactors (NRO) and the Office of Nuclear Reactor Regulation (NRR) have revised SRP Section 3.9.2 and 3.9.5 (Enclosures). The present revisions updates the April 1996 draft and the staff affirms the content introduced in the 1996 draft. The revised portions of the SRP Section have been highlighted to aid in identifying the technical information that has been added or revised. Additional changes are summarized on the last page of the SRP section.

In addition, these revisions have been administratively updated in accordance with the Office of Nuclear Reactor Regulation (NRR) Office Instruction, LIC-200. The administrative update is comprised of assigning the review responsibilities by function, with the responsible organizations maintained separately from the SRP itself to minimize impacts of office reorganizations, and editorial and formatting changes. The revision also adds standard paragraphs to extend application of the updated SRP section to prospective submittals by applicants pursuant to 10 CFR Part 52.

Based on the nature of the changes, we recommend that ACRS elect not to review the proposed revision to the SRP. If the ACRS determines that there is a need to review the proposed revision to the SRP, then please inform the technical contact and NRR will support a subsequent ACRS briefing. Also, the staff has determined that the changes do not involve any new staff positions; therefore, we will not be requesting a review by the Committee to Review Generic Requirements (CRGR). Note that most SRP sections will be issued as final versions without publishing them as draft and requesting comment. The staff is revising the SRP in this manner to provide a more up-to-date SRP in light of the requirement in

10 CFR 50.34(h) for an applicant to evaluate its facility against the SRP revision in effect six months before the docket date of the application. In addition, this memo and its enclosure will be made publically available as a preliminary SRP section revision. It will be formally published following reconciliation against the ongoing Part 52 rulemaking and regulatory guide updates including Regulatory Guide 1.206, "Combined License Applications for Nuclear Power Plants (LWR Edition)." After formal issuance, the SRP will be available for public comment. Comment resolution will be addressed in subsequent SRP revisions. Prior to revision to individual sections, comment resolution may establish a basis for how alternatives to the NUREG-0800 acceptance criteria provide an acceptable method of complying with the U.S. Nuclear Regulatory Commission's regulations.

For questions concerning these documents, please contact Jai Rajan at 301-415-3306.
