

PETITION SUPPORTING EXELON'S NEW NUCLEAR REACTORS AT CLINTON

We, the undersigned individuals SUPPORT plans by Exelon to secure an Early Site Permit (ESP) to construct new nuclear reactors at its Clinton facility, on the following grounds:

- We concur with the NRC's conclusion that environmental impacts would not prevent issuing an ESP for the Clinton site.
- We believe that nuclear energy is safe, clean, reliable and cost effective, and as such, it should continue to be an important part of a balanced energy mix.
- We support the ESP process as a means to facilitate an open and thorough evaluation of future nuclear projects, while ensuring the timeliness and predictability of the process.
- We commend Exelon for being proactive and farsighted when looking for reliable methods of addressing expected increases in energy demand over the coming years, while minimizing the environmental footprint of the selected energy sources, as well as the economic burden to Exelon customers.

Therefore, we urge the U.S. Nuclear Regulatory Commission to GRANT Exelon's application for an Early Site Permit.

- We believe that nuclear energy is safe, clean, reliable and cost effective, and as such, it should continue to be an important part of a balanced energy mix.
- We support the ESP process as a means to facilitate an open and thorough evaluation of future nuclear projects, while ensuring the timeliness and predictability of the process.
- We commend Exelon for being proactive and farsighted when looking for reliable methods of addressing expected increases in energy demand over the coming years, while minimizing the environmental footprint of the selected energy sources, as well as the economic burden to Exelon customers.

COPY

Therefore, we urge the U.S. Nuclear Regulatory Commission to GRANT Exelon's application for an Early Site Permit.

- We concur with the NRC's conclusion that environmental impacts would not prevent issuing an ESP for the Clinton site.
- We believe that nuclear energy is safe, clean, reliable and cost effective, and as such, it should continue to be an important part of a balanced energy mix.
- We support the ESP process as a means to facilitate an open and thorough evaluation of future nuclear projects, while ensuring the timeliness and predictability of the process.
- We commend Exelon for being proactive and farsighted when looking for reliable methods of addressing expected increases in energy demand over the coming years, while minimizing the environmental footprint of the selected energy sources, as well as the economic burden to Exelon customers.

Therefore, we urge the U.S. Nuclear Regulatory Commission to GRANT Exelon's application for an Early Site Permit.
