

TELEPHONE CONVERSATION RECORD	Date: 10-22-97 & 10-31-97	Time: 1:30pm & 2:10pm
Mail Control No.: n/a	License No.: SMB- 743	Docket No.: 040-07102
Person Called: Dave Smith, RSO	Organization: Shieldalloy	Telephone Number: 609 692-4200 (226)
Person Calling: Penny Lanzisera		
Subject: EPA sampling outside of Shieldalloy facility		
<p>Summary: Mr. Smith indicated the following:</p> <ol style="list-style-type: none"> 1) He had spoken with Heather Astwood and she had sent him a copy of the EPA letter with the preliminary results. 2) EPA identified cesium in the gamma spec analysis, so he is not sure that EPA identified Shieldalloy's material. 3) Shieldalloy does not have enough information to determine whether the contamination was theirs and do not plan to perform their own surveys. 4) Do not plan on doing anything until see isotopic. 5) Currently he is working on the amendment to Shieldalloy's license and will review this issue with Carol Berger, their consultant, to determine whether surveys of the area outside of the fence line could be incorporated into the next quarterly surveys. 6) Glassworks on property previously (South Jersey Specialty Glass), not Shieldalloy. <p>Called Mr. Smith back on the 10-31-97 to followup on his conversations with the Consultant about doing additional surveys of the area outside of Shieldalloy's fence line. Mr. Smith indicated that an extensive survey had been performed in 12/91 that reported on the radiological characterization and that the EPA results were not consistent with this survey. He indicated that Shieldalloy would wait to see the isotopic analysis before deciding if any additional surveys were necessary.</p>		
Action Required/Taken: Followup on isotopic analysis with EPA and discuss independent survey and sampling.
